Community-Wide Meeting

Tracy City Hall: 333 Civic Center Plaza (Room 203), Tracy

Thursday, September 28, 2017

7 PM, Panel Presentations by the Environmental Protection Agency manager for the Site 300 cleanup, *Andrew Bain*, environmental scientist, *Peter Strauss*, Tri-Valley CAREs' executive director, *Marylia Kelley*, & bi-lingual outreach specialist/Tracy resident, *Valeria Salamanca*. Q&A will commence afterwards. Petitions in English & Spanish to protect Tracy residents from Site 300 pollution will be available to sign.

What is Site 300? Join the Conversation

Site 300 is an 11-square mile test site used for the development of nuclear bombs and high explosives. It is operated by the Livermore Laboratory and located on Corral Hollow Rd., southwest of downtown Tracy. Weapons activities at the Livermore Laboratory Main Site and its Site 300 in Tracy have resulted in hundreds of documented toxic and radioactive releases to our air, soil, groundwater aquifers and surface waters. These activities, and the dangers they pose to human health and our Tracy community, are ongoing.

The EPA placed Site 300 on its Superfund list of most poisoned sites in the country in 1990. The pollution is massive. Cleanup of the nuclear & hazardous wastes at Site 300 that have leaked into the soil, aquifers, springs and streams will be multi-generational. Important decisions about how much contamination will be cleaned up - and how much will be left in the environment - will be made soon. ***Your voice is needed now!***
